

DENIM EFFECTS

Creating textiles using the best technology available

ABRASION

UNIZIM QLW

Neutral enzyme for ECO abrasion of denim goods.

UNIZIM QLW is a specially designed enzymatic solution for denim treatment to obtain an excellent abrasion effect in cellulosic fibers in a very sustainable condition.

UNIZIM BPL

Neutral cellulase for stone- wash process.

UNIZIM BLP is a high-performance, for stone-wash process. This product allows new shades and finishes to be created easily and cost effectively in an environmentally friendly way.

UNIZIM LVM

Acid cellulase for biopolishing and stone-wash.

UNIZIM LVM is a ready to use product for finishing cellulosic to improve the fabric surface. Moreover, in stone-wash treatment allows to get vintage effects on garment denim without use stones.

UNIZIM CCA

Enzyme for simultaneous abrasion and desizing.

UNIZIM CCA is a specially designed high-performance enzymatic solution for abrasion without the need for prewash, allowing new shades and finishes to be created easily, cost-effectively, and in a sustainable way.

BIOPOLISHING

UNIZIM D-LT

Neutral and low temperature enzyme for biopolishing.

UNIZIM D-LT is a ready-to-use product for biopolishing. During the process it removes dead cotton and protruding fibers from the fabric surface to give a great appearance and to avoid fuzz and pills from forming after wash and wear.

UNIZIM DR

Neutral enzyme for biopolishing

UNIZIM DR is a ready-to-use product for biopolishing. This is an enzymatic process for finishing cellulosic fabrics in which the enzyme performs a controlled hydrolysis of the cellulosic fibres to modify the fabric surface.

AUXILIARIES

AMPLEX SIL-AN

Elastane protector in denim wash.

AMPLEX SIL-AN prevents the degradation of elastane fibres during the washing process of denim fabrics.

ACTIVATOR QLW

Compound with an activation action.

ACTIVATOR QLW is a special preparation to obtain excellent results working together with UNIZIM QLW.

ESTEROL RDA

Activator of chlorine bleaching effect.

ESTEROL RDA activates chlorine bleaching effect and accelerates indigo degradation.

Very good level of white is obtained.

COTEMOLL CWB

Antiback-staining agent for denim.

COTEMOLL CWB is an excellent dispersing and indigo antiback-staining agent for denim treatment avoiding the re-deposition of impurities, dirty and dye.

ESTERFIX DMP

Fixing agent.

ESTERFIX DMP is a special fixing agent designed to improve wet and dry fastness.

ESTERFIX SEC

Fixing agent.

ESTERFIX SEC is a fixing agent to improve the wash fastness.

ESTEROL LBW

Permanganate and hypochlorite neutralizer for garment treatment.

ESTEROL LBW avoids the yellowing produced during bleaching process. It eliminates coloration produced by manganese dioxide.

ACTIVATOR A7

ACTIVADOR A7 increases the power of permanganate during the bleaching on jeans.

SOFTENERS

ROMSOFT AQ-90

Antistatic softener for all kind of fibbers.

Hight concentration cationic base softener (90% active matter) can be diluted to produce softeners to different concentrations.

SILICONA CENTER SAN

Shear stable silicone softener in micro-emulsion

SILICONA CENTER SAN gives an “inner softness” and smooth handle to all kind of fibres, particularly to blouse, shirting, and garment fabrics.

SILICONA CENTER MHL

Hydrophilic silicone softener in macro-emulsion

SILICONA CENTER MHL gives a very soft, smooth, and flexible touch to all kinds of fibres in general and on cellulosic fibres. Very suitable to articles for towels. It improves water absorption capability and humidity transmission of treated fabrics.

SILICONA CENTER GB

Micro-emulsion of elastomeric silicone.

SILICONE CENTER GB is an excellent product to obtain siliconic and smooth handle.

Improves the elasticity and it can be applied and all types of fibbers.

SUAVIZANTE 1205-B

Cationic softener and anti-static agent for Jeans finishing with a protective effect on indigo agents such as Ozone.

SUAVIZANTE 1205-B has excellent softening qualities that give to the treated article a soft touch with very smooth surface.

SILICONA CENTER N-1810

Silicone nano-emulsion.

SILICONA CENTER N-1810 gives an excellent soft and smooth handle. It improves sewability and fibber resistance.
